

For Immediate Release:

Absolute Benefit in Security Films

Atlanta, Georgia – October 1, 2010 - Product demonstration proves that Security Film, also known as Safety Film can deter smash and grabs, vandalism, and graffiti while providing safety from flying and falling glass in the event of an accident or severe weather.

- *Increased Safety*- Safety and security films provide a clear barrier of protection that helps to hold glass in place when it shatters due to breakage from an accident, severe weather, or forced entry.
- *Increased Protection*- Security film is a powerful deterrent to smash and grab theft. It forms a strong shield that holds broken glass in place, delaying and deterring perpetrators who attempt quick and easy entry through shattered windows.
- *Cosmetic Protection*- Safety and Security film forms an invisible protective coating over the glass that helps prevent graffiti, tagging, and other defacing. If a vandal strikes, the film can be peeled off and replaced easily, eliminating costly glass replacement.
- *Environmental Protection*- windows with protective films become much more impact resistant protecting a home or business from damage that occur from severe weather which can cause serious property damage and death or injury. Much of this damage is prevented with safety and security film. Many areas of the country also offer reduced insurance rates for homes outfitted with impact resistant windows.

Chris Deluca of All Pro Window Tinting says, "many of my customers are interested in the safety and security of their property and loved ones. Protective films provide sustained penetration resistance, hazard protection, and a persistent weather seal. It's a smart investment for homes and businesses, any way you look at it."
